## KEY FEATURES

### EV Charging Station Monitoring NEW

- + Monitor energy consumption in real-time for EV charging stations with revenue-grade accuracy. AcuDC 240 provides detailed insights through accumulated totals and historical data logs and is compatible with a range of optional Accuenergy DC shunts from 50A to 2000A input options, ensuring precise tracking of 0.1 - 0.5% accuracy level.

### High Accuracy Measurements

- + With 0.5% accuracy on power & energy\* and 0.2% accuracy on voltage & current, the AcuDC 240 meter captures precision metrics across DC systems up to 1000Vdc. Meter critical, real-time voltage, current, power, energy, and amp-hour parameters while viewing real-time data instantly on the multi-function display.

### Modbus-RTU Communications

- + Communicate all DC metered data to SCADA, PLC, or other external systems using industry-standard Modbus-RTU protocol via an onboard RS485 communication port. Daisy-chain multiple meters together for efficient data collection.

### Cable Loss Compensation NEW

- + Cable resistance causes inaccuracies in current and voltage readings, impacting power and energy measurements. It compensates for losses over long cable runs, ensuring accurate and reliable measurements. For infrastructures where the meter is far from the load in an industrial facility or EV charging station it can provide more accurate billing, energy efficiency, & reduced costs.

### I/O Modules

- + A variety of optional analog, digital, relay, and alarm output combinations are available with optional I/O modules. Each module features a unique combination of DI, AO, AI, RO, or DO options to extend the capabilities of the AcuDC 240 meter. Certain modules also feature a Hall effect sensor power supply for additional flexibility.

### Built-In Data Logging

- + The AcuDC offers three configurable log files where meter parameters such as power, energy, voltage, current, amp hour, and DI count data are recorded. Log at a 1-minute interval for up to four months for later analysis.
